Office Action Summary

Part of Paper No. 7

Restriction to one of the following inventions is required under 35 U.S.C. § 121:

I. Claims 1-10, drawn to a system for the storage of hydrogen, classified in Class 422, subclass 189.

II. Claims 11-18, drawn to a method for the storage of hydrogen, classified in Class 423, subclass 648.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process as claimed in claim 16 can be practiced by another and materially different apparatus, such as one which does not include electrolysis means for providing the electrolysis of water to generate hydrogen. Claims 1-6 and 8-10 are separate and distinct from claims 11-15, 17 and 18, since claim 16 is evidence that claims 11-15, 17 and 18 do not depend upon the details of claims 1-6 and 8-10 for patentability. Claim 7 is separate and distinct from claims 11-18, since the process as claimed in claims 11-18 can be practiced by another and materially different apparatus from that recited in claim 7, such as one which does

not include storage means connected to the reaction means for the storage of the storage compound, or reaction means connectable to the storage means. The reaction of the hydrogen or carbon dioxide, the storage of the methanol and the further reaction of the methanol could all be carried out in one reaction vessel, for example.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classifications, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, and vice versa, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently

named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
